

Draft Validation Statement – Bhavik Barot (File No. 6076763)

Supervisor: Vinit Bhamare (Transformation, QMS & Continuous Improvement), Pratt & Whitney Canada

Below, I confirm how his work addressed the complementary areas identified by OIQ:

1. Engineering Economics

Bhavik supported the alignment of Engineering and Management Bills of Materials (BOMs) for **engine development programs and customer-requested modifications**. This work directly impacted on **cost evaluation and process efficiency**, ensuring accurate tracking of material usage and program costs. In addition, he developed a **Project Management Dashboard in Power BI integrated with Power Automate**, which was adopted by the team as part of **continuous improvement efforts**. The dashboard provided real-time KPI monitoring and enabled more effective decision-making within the team. These tools improved overall economic analysis by highlighting **return on investment (ROI) considerations** and allowing the comparison of process alternatives for efficiency gains.

2. Health & Safety

Bhavik contributed to procedure development and tracking activities within Pratt & Whitney's repair and overhaul operations, which are heavily governed by aviation safety regulations. His work ensured that operational data and BOM documentation were accurate and aligned with certification standards, thereby **reducing risks to worker safety and maintaining compliance with aviation health and safety protocols**.

3. Ethics & Professional Conduct

Bhavik demonstrated strong ethical standards by ensuring **accuracy and transparency in KPI reporting**, which was used by management for compliance and operational decisions. He collaborated with cross-functional teams and consistently followed company procedures related to quality assurance (QA) and regulatory compliance. His work supported the integrity of engineering data used in regulated aerospace processes, which is a key element of professional conduct in engineering.

4. Sustainable Development

Through his process optimization and reporting initiatives, Bhavik's work supported a balance between **economic efficiency, operational impact, and resource use**. By reducing manual rework and improving traceability of materials and processes, his contributions promoted long-term operational sustainability. His dashboard tools also provided visibility on process trends, which enabled the team to evaluate trade-offs between cost, efficiency, and resource allocation.

Conclusion

During his internship, Bhavik applied engineering knowledge and professional judgment in ways that clearly address the complementary areas of **economics, health & safety, ethics & professional conduct, and sustainable development**. I confirm the accuracy of this information based on my direct supervision of his work at Pratt & Whitney Canada.

Sincerely,

Vinit Bhamare
